

Explore Your World!  
**BIODIVERSITY MONTH**

**May 2002**

By studying the visual system of horseshoe crabs, scientists have learned a lot about how human eyes work. But horseshoe crabs, and many other species, are quickly disappearing and with them a chance to better fight human diseases. Every plant and animal on Earth is vital not only for the health of the planet, but for our health, as well.

**Don't let nature's diversity disappear.**
