

Explore Your World!
BIODIVERSITY MONTH
May 2002

*To someone
with heart disease,
this guy's a prince.*

Did you know the Houston Toad produces alkaloids which can help prevent heart attacks in humans? In fact, scientists are constantly discovering new plant and animal species that could one day provide cures to disease. But by rapidly destroying the earth's green spaces, we could unknowingly wipe out these potential cures, and our future. It's time to take a stand and protect the grand diversity of life.
